

1. It should be possible to add the same product to the cart twice.

I don't get this comment, as the user can add as many items as he wants of the same products

2. Please fetch the currency list from the API.

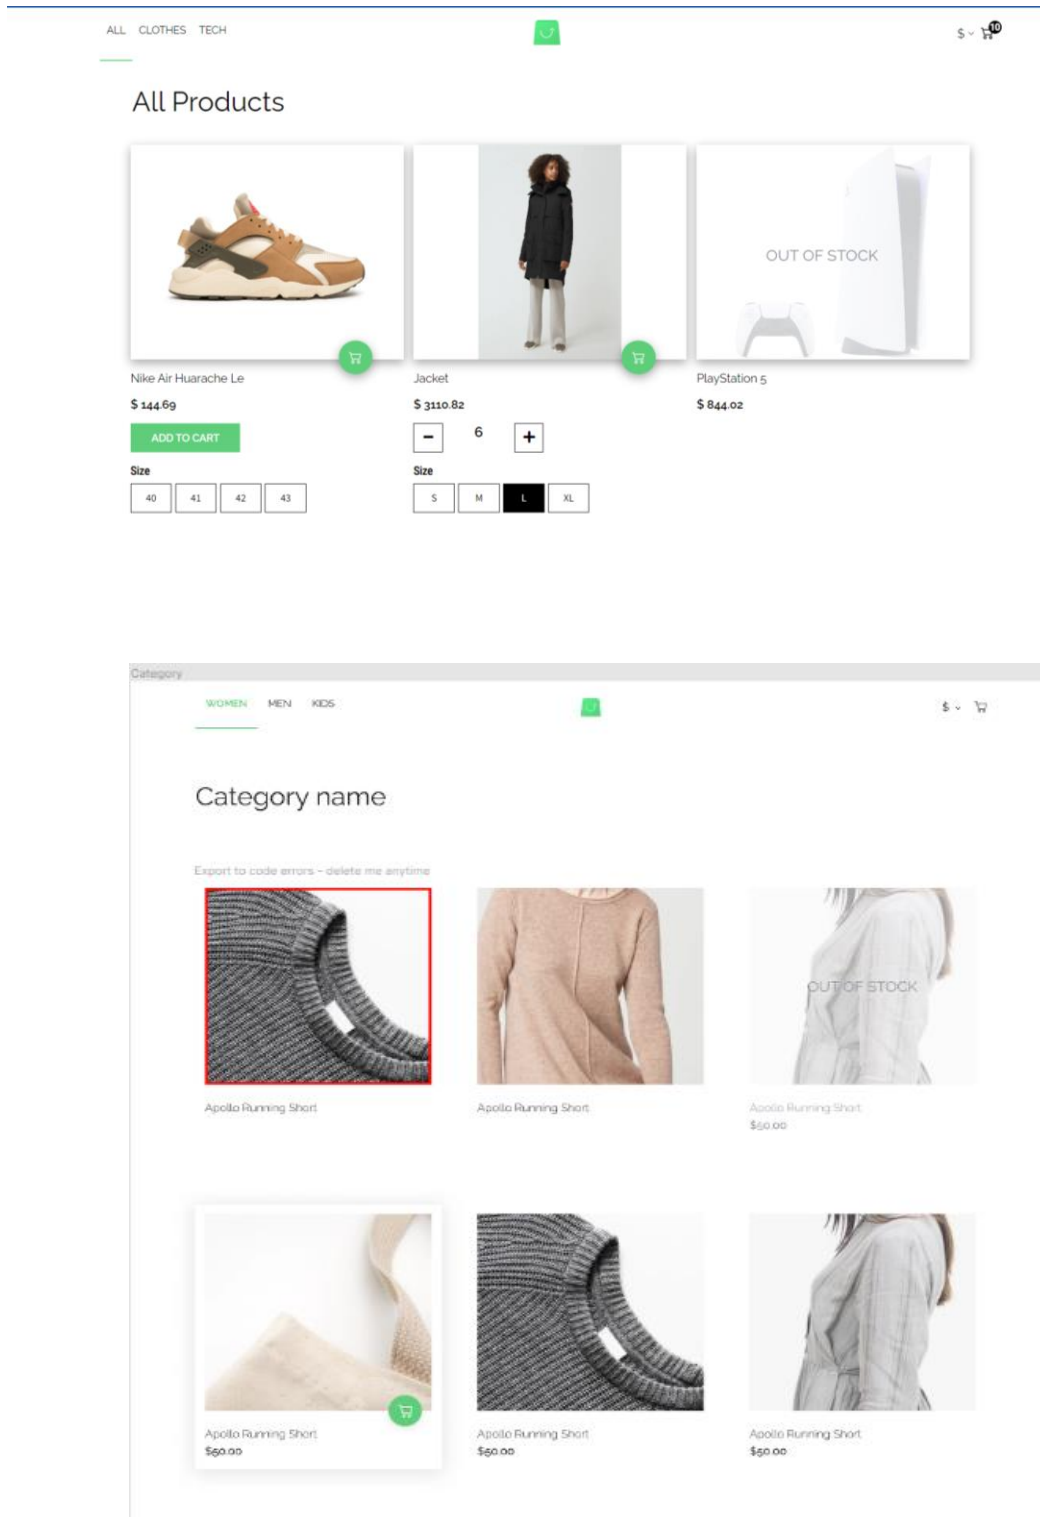

I do, the code for fetching them is in Header.js

```
41     this.hideCurrencyList();
42   }
43
44   onChosseCatHandler(chooseCat) {
45     this.props.getSelectedProductsLists(chooseCat);
46     localStorage.setItem("category", chooseCat);
47   }
48   getCartItemsNo() {
49     let amuont = 0;
50     const mapping = this.props.cartItems.map((el) => (amuont += el.quantity));
51     this.numnerOfItems = amuont;
52   }
53   getCategoriesNames() {
54     const prods = this.props.query;
55
56     if (prods) {
57       this.categoryNames = prods.map((prod) => prod.name);
58     }
59   }
60   getCurrencyNames() {
61     const prods = this.props.query;
62
63     if (prods.length > 0 && prods !== undefined) {
64       if (prods[0] !== undefined && prods[0].products !== undefined) {
65         this.currencyNames = prods[0].products[0].prices.map(
66           (prod) => `${prod.currency.symbol} ${prod.currency.label}`
67         );
68       }
69     }
70   }
```

3. PLP looks awful and should be redone completely. Please look at the design.

Would you plz tell me what is the main difference between my implementation and the design that I should fix ?

4. Only some image thumbnails are visible.

There are scroll arrows
