1. It should be possible to add the same product to the cart twice.

   I don't get this comment, as the user can add as many items as he wants of the same products

2. Please fetch the currency list from the API.

I do, the code for fetching them is in Header.js

```
Header.js - scandiweb - Visual Studio Code

...     Cart.js        Header.js 1  ×

src > components > UI > Header >  Header.js > ...

41          this.hideCurrencyList();
42        }
43
44        onChosseCatHandler(choosecCat) {
45          this.props.getSelectedProductsLists(choosecCat);
46          localStorage.setItem("category", choosecCat);
47        }
48        getCartItemsNo() {
49          let amuont = 0;
50          const mapping = this.props.cartItems.map((el) => (amuont += el.quantity));
51          this.numcerOfItems = amuont;
52        }
53        getCategoriesNames() {
54          const prods = this.props.query;
55
56          if (prods) {
57            this.categoryNames = prods.map((prod) => prod.name);
58          }
59        }
60        getCurrencyNames() {
61          const prods = this.props.query;
62
63          if (prods.length > 0 && prods !== undefined) {
64            if (prods[0] !== undefined && prods[0].products !== undefined) {
65              this.currencyNames = prods[0].products[0].prices.map(
66                (prod) => `${prod.currency.symbol} ${prod.currency.label}`
67              );
68            }
69          }
70        }
```

3. PLP looks awful and should be redone completely. Please look at the design.

Would you plz tell me what is the main differnece between my implentation and the desing that I should fix ?

4. Only some image thumbnails are visible.

There are scroll arrows

Great sneakers for everyday use!
